

HR ANALYTICS DASHBOARD FINAL REPORT

Project Title

HR Analytics Dashboard using Microsoft Excel

Prepared By: Kuldeep Rathore

Domain: Human Resource Analytics / Data Analytics

Tool Used: Microsoft Excel

Project Type: Business Intelligence & HR Analytics Dashboard

Executive Summary

In today's competitive business environment, employee retention and workforce optimization are among the most critical challenges faced by organizations. Human Resource departments require data-driven systems capable of transforming raw employee data into actionable business insights.

This project presents a comprehensive HR Analytics Dashboard developed using Microsoft Excel. The dashboard is designed to help HR leaders, managers, and decision-makers monitor employee statistics, analyze workforce trends, identify attrition patterns, and support strategic HR planning.

The solution integrates advanced Excel functionalities including Pivot Tables, Pivot Charts, KPI Cards, Interactive Filters, Data Cleaning, and Dashboard Visualization techniques to create an interactive and professional analytics platform.

The dashboard enables stakeholders to:

- Monitor total workforce metrics
- Track employee attrition rates
- Analyze employee demographics
- Identify high-risk departments and job roles
- Improve employee retention strategies
- Support data-driven HR decisions

1. Introduction

Human Resource Analytics has become a critical component of modern organizational strategy. Companies generate

massive amounts of employee-related data every day, but without proper analysis, this data cannot provide meaningful business value.

Traditional HR reporting methods often fail to provide:

- Real-time workforce visibility
- Interactive data exploration
- Predictive understanding of attrition
- Department-level employee insights
- Strategic workforce intelligence

The HR Analytics Dashboard project was developed to solve these problems by creating a centralized and interactive Excel dashboard capable of delivering meaningful workforce insights.

2. Business Problem Statement

Organizations face several workforce management challenges, including:

- Increasing employee attrition
- High recruitment and onboarding costs
- Low employee retention
- Difficulty identifying workforce trends
- Inefficient HR reporting systems
- Lack of centralized analytics platforms

Employee attrition negatively impacts:

- Productivity
- Team collaboration
- Operational continuity
- Organizational knowledge retention
- Financial performance

3. Project Objectives

Core Objectives

- Develop an interactive HR Analytics Dashboard
- Analyze employee attrition patterns
- Visualize workforce demographics
- Monitor employee performance indicators

- Provide department-wise analytics
- Support strategic HR planning

4. Dataset Overview

The project uses employee workforce data containing various HR-related attributes.

Dataset Includes

- Employee demographics
- Department information
- Job roles
- Age groups
- Gender
- Education background
- Marital status
- Employee attrition status

5. Tools & Technologies Used

- Microsoft Excel
- Pivot Tables
- Pivot Charts
- Slicers
- Excel Formulas
- Conditional Formatting

6. Project Methodology

Phase 1: Data Collection

- Imported employee dataset into Excel
- Verified dataset completeness
- Examined data quality

Phase 2: Data Cleaning

- Removed duplicate records
- Handled missing values
- Standardized data formatting
- Corrected inconsistent entries

Phase 3: Data Transformation

- Created calculated columns
- Categorized employee age groups
- Calculated KPI metrics
- Prepared summarized datasets

Phase 4: Data Analysis

- Attrition patterns
- Employee demographics
- Department-wise attrition
- Education-wise attrition
- Gender distribution
- Marital status analysis

Phase 5: Dashboard Development

- KPI cards
- Interactive charts
- Dynamic filters
- Dashboard layout
- Professional UI design

7. Dashboard Overview

Dashboard KPIs

- Total Employees: 1470
- Attrition: 237
- Active Employees: 1233
- Attrition Rate: 16.12%
- Average Age: 37

8. Dashboard Components & Insights

Employee Gender Distribution

- Male employees represent approximately 60% of the workforce.
- Female employees represent approximately 40% of the workforce.

Attrition by Age Group

- 25–34 age group has the highest attrition.
- Young professionals are leaving at a higher rate.

Attrition by Job Role

Highest attrition observed in:

- Laboratory Technician
- Sales Executive
- Research Scientist

Attrition by Marital Status

- Single employees show the highest attrition.
- Married employees have moderate attrition.

Education-wise Attrition

- Bachelor's Degree holders contribute the highest attrition.
- Master's Degree holders are the second highest.

Department-wise Attrition

- R&D; department faces maximum attrition.
- Sales department shows moderate attrition.
- HR department has the lowest attrition.

9. Key Findings

- Attrition rate stands at 16.12%
- Young professionals are more likely to leave
- R&D; department faces maximum attrition
- Single employees show higher turnover
- Technical roles are high-risk positions

10. Business Impact

Strategic Benefits

- Better workforce visibility
- Improved HR decision-making
- Faster reporting and analysis
- Improved employee retention planning

Operational Benefits

- Reduced manual reporting effort
- Improved HR efficiency
- Centralized workforce monitoring

Financial Benefits

- Reduced recruitment costs
- Lower onboarding expenses
- Improved employee productivity

11. Recommendations

- Improve employee engagement
- Conduct regular feedback sessions
- Enhance workplace culture
- Introduce mentorship programs
- Provide learning opportunities
- Create promotion pathways

12. Project Challenges

- Data inconsistency
- Missing values
- Dashboard design optimization
- KPI alignment

13. Future Scope

- Predictive analytics
- AI-driven attrition prediction
- Real-time database integration
- Automated reporting systems

14. Skills Demonstrated

Technical Skills

- Microsoft Excel
- Data Cleaning
- Data Visualization
- Dashboard Design
- KPI Reporting

Analytical Skills

- Workforce Analysis
- HR Analytics

- Data Interpretation
- Strategic Thinking

15. Conclusion

The HR Analytics Dashboard successfully transforms raw employee data into meaningful business intelligence through advanced Excel analytics and interactive visualization techniques.

The dashboard enables stakeholders to:

- Understand workforce behavior
- Monitor attrition trends
- Improve HR planning
- Make informed business decisions

This project demonstrates how Microsoft Excel can serve as a powerful business intelligence tool capable of delivering enterprise-level HR analytics solutions.

Final Outcome

- Professional and interactive analytics solution
- Actionable workforce insights
- Strategic HR intelligence
- Improved decision-making capabilities

Thank You
